

High Pressure Cylinders

Sharpsville Container Corporation produces a variety of high pressure cylinders for use in medical, specialty gas, industrial safety and calibration applications. These units are designed for single-use with a two-year shelf life and can withhold pressures up to 2200 PSI.

The Sharpsville Advantage includes robotic welding procedures and the use of CGA approved valve connections coupled with strict inspection and testing guidelines to ensure conformance to the most stringent industry standards. An attractive and durable powder coat paint is applied to enhance the appearance of each unit that is produced.
